PROFESSIONAL SUMMARY

Full-stack software engineer with a Master's in Computer Science from Syracuse University and hands-on experience building web applications, backend services, and distributed systems. Brings strong foundations in REST API design, cloud infrastructure, and cryptographic systems, with a track record of technically rigorous projects across Python, JavaScript, and TypeScript.

EDUCATION

Syracuse University

Master of Science, Computer Science. GPA: 3.47/4.0.

Syracuse, NY

May 2026

Medi-Caps University

Bachelor of Technology, Computer Science and Engineering.

Indore, India

May 2024

EXPERIENCE

Full-Stack Developer

iConsult Collaborative, Syracuse University

Nov 2025 – May 2026

Syracuse, NY

- Design and develop full-stack web application modules using React and Next.js in a TypeScript codebase
- Evaluate system design trade-offs across frontend frameworks to improve modularity and maintainability
- Implement CI/CD pipelines via GitHub Actions within Agile development cycles for reliable delivery

Network Engineering Intern

Cisco

May 2023 – July 2023

Indore, India

- Configured and deployed switches, routers, and end devices for reliable connectivity across local and remote environments
- Designed IPv4/IPv6 addressing schemes supporting scalable network segmentation
- Applied ACLs and port security best practices to strengthen infrastructure reliability

PROJECTS

Multi-Agent Code Review System (LangGraph / FastAPI)

Jan 2026 – May 2026

- Architected a parallel multi-agent review pipeline with LangGraph fan-out/fan-in topology and Claude Sonnet synthesizer; achieved 90% recall (27/30 vulnerabilities) across 9 CWE classes
- Built full-stack platform (FastAPI, React, Supabase) integrating Semgrep, Bandit, Ruff, and ESLint static analysis with LLM reasoning and SSE streaming at 52.3s average processing time

SecureChat: End-to-End Encrypted Messaging Protocol (Python)

Aug 2025 – Dec 2025

- Built a client-server encrypted chat application implementing X25519 Diffie-Hellman key exchange and ChaCha20-Poly1305 AEAD with HKDF-SHA256 key derivation
- Designed replay attack prevention using Bloom filter-based message ID tracking and timestamp validation with TTL
- Implemented Signal-inspired key ratcheting deriving fresh encryption keys per message for forward secrecy

E-Ballot: Blockchain-Based Voting System

Sept 2023 – Dec 2023

- Architected a decentralized e-voting system on Ethereum using three Solidity smart contracts optimized for gas efficiency; Voting Contract consumed 734,353 gas at 0.0147 ETH per deployment
- Achieved 66.67 votes/minute throughput, outperforming traditional voting systems by 4.3x as validated in a peer-reviewed publication

Transformer-Based Automatic Text Simplification (T5 / HuggingFace)

Aug 2025 – Dec 2025

- Fine-tuned T5-small on 50,000 WikiAuto sentence pairs; benchmarked against BART and Phi-3 Mini (zero-shot) on ASSET
- Built an end-to-end ML pipeline with mixed-precision (FP16) training, gradient accumulation, and multi-metric evaluation (SARI, BLEU, ROUGE-L, Flesch Reading Ease)

CERTIFICATIONS

- PCAP: Programming Essentials in Python | OpenEDG Python Institute — July 2023
- Cybersecurity Essentials | Cisco Networking Academy — July 2023
- Google Cloud Skills Boost | Google Cloud Badges (Kubernetes, BigQuery, Cloud ML APIs) — Oct 2021

SKILLS

Languages: Python, Go, Java, JavaScript, TypeScript, C, C++, C#

Backend: Node.js, Express.js, Django, Kafka, REST APIs, API Design

Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS

Databases: PostgreSQL, MySQL, MongoDB, Redis, Oracle

Cloud/DevOps: AWS, GCP, Docker, Kubernetes, Git, CI/CD, GitHub Actions

AI/ML: TensorFlow, PyTorch, Scikit-learn, HuggingFace, LangGraph, LLM Integration

Networking/Security: Cisco IOS, IPv4, IPv6, VLAN, ACLs
